

Internship Opportunity – AI & Quantitative Finance Research

AI Research Internship: Macroeconomic Forecasting & Financial Intelligence

Company: FINAID Solutions Tech.

Location: Remote (with regular online meetings)

Duration: 3–4 months (Flexible depending on university requirements)

Positions Available: Two Research Teams

About the Internship

FINAID Solutions is offering an exciting research internship for highly motivated students interested in **Artificial Intelligence, Machine Learning, Data Science, Quantitative Finance, and Economics**.

Interns will work on a real-world research project focused on developing AI models capable of forecasting global macroeconomic and financial indicators. This project combines machine learning, time-series forecasting, feature engineering, and financial intelligence to solve practical forecasting problems encountered by quantitative investment professionals.

This is an excellent opportunity for students who wish to gain hands-on experience with large-scale financial data and contribute to an active research initiative.

Project Title

AI-Powered Macroeconomic Forecasting Using Global Financial Time-Series Data

Project Objective

Develop predictive models that forecast, for each financial or macroeconomic indicator, **whether its value will increase or decrease during the following month**.

The project emphasizes:

- Time-series forecasting
- Machine Learning and AI
- Feature engineering
- Model selection and evaluation

- Financial and macroeconomic data analysis
 - Research reproducibility and scientific experimentation
-

Available Data

Students will work with monthly historical data covering a diverse set of global financial indicators, including:

- Global Equity Indices
- Sector Indices
- Commodity Markets
- Currency Markets (FX)
- Fixed Income Indicators
- Thematic Investment Indices
- Other macroeconomic and financial variables

Additional documentation describing each indicator and dataset will be provided to the selected interns.

Expected Responsibilities

- Explore and understand financial time-series data.
- Design and implement forecasting models using appropriate AI and machine learning techniques.
- Perform feature engineering and model optimization.
- Evaluate forecasting performance using suitable validation methodologies.
- Document research findings and experimental results.
- Present progress during periodic research meetings.

Students are encouraged to explore innovative ideas rather than relying solely on conventional forecasting techniques.

Performance Incentive

Exceptional performance will be recognized.

If a forecasting model demonstrates an **overall prediction accuracy of at least 65% over the most recent six-month evaluation period (starting from January 2026)** and continues to maintain this level of performance during the subsequent five months, there may be an opportunity for **competitive financial compensation**, subject to the company's evaluation and the continued robustness of the model.

Please note that achieving this performance threshold does **not** automatically guarantee compensation; it serves as one of the key technical milestones considered during the evaluation process.

Internship Recognition

Regardless of forecasting performance, interns who actively participate, demonstrate professionalism, and complete the internship requirements will receive an official **Internship/Testimonial Certificate** from FINAID Solutions recognizing their research contribution and commitment.

Preferred Qualifications

Applicants should have knowledge of some of the following:

- Artificial Intelligence
- Machine Learning
- Data Science
- Statistics
- Time-Series Analysis
- Python or R
- Economics, Finance, Computer Science, Data Science, Mathematics, Statistics, or related disciplines

Strong analytical thinking and curiosity are valued more than prior financial market experience.

What Students Will Gain

- Experience working on a real-world AI research project.
 - Exposure to quantitative finance and macroeconomic forecasting.
 - Practical experience with financial datasets.
 - Mentorship from experienced researchers and quantitative practitioners.
 - Opportunity to contribute to a potentially impactful financial intelligence platform.
 - Official internship recognition from FINAID Solutions.
 - Potential eligibility for performance-based financial compensation.
-

Application

Interested students should submit:

- Curriculum Vitae (CV)
- Brief statement of interest describing why they would like to participate in this research internship.

Shortlisted candidates may be invited for a brief online interview.
